Digital Transformation

How do we deliver the type of end-user experience you get from companies like Amazon and Uber?

How can we ensure the investments we make in becoming a Digital Service Provider support our future goals?

Vodafone Digital Transformation Journey

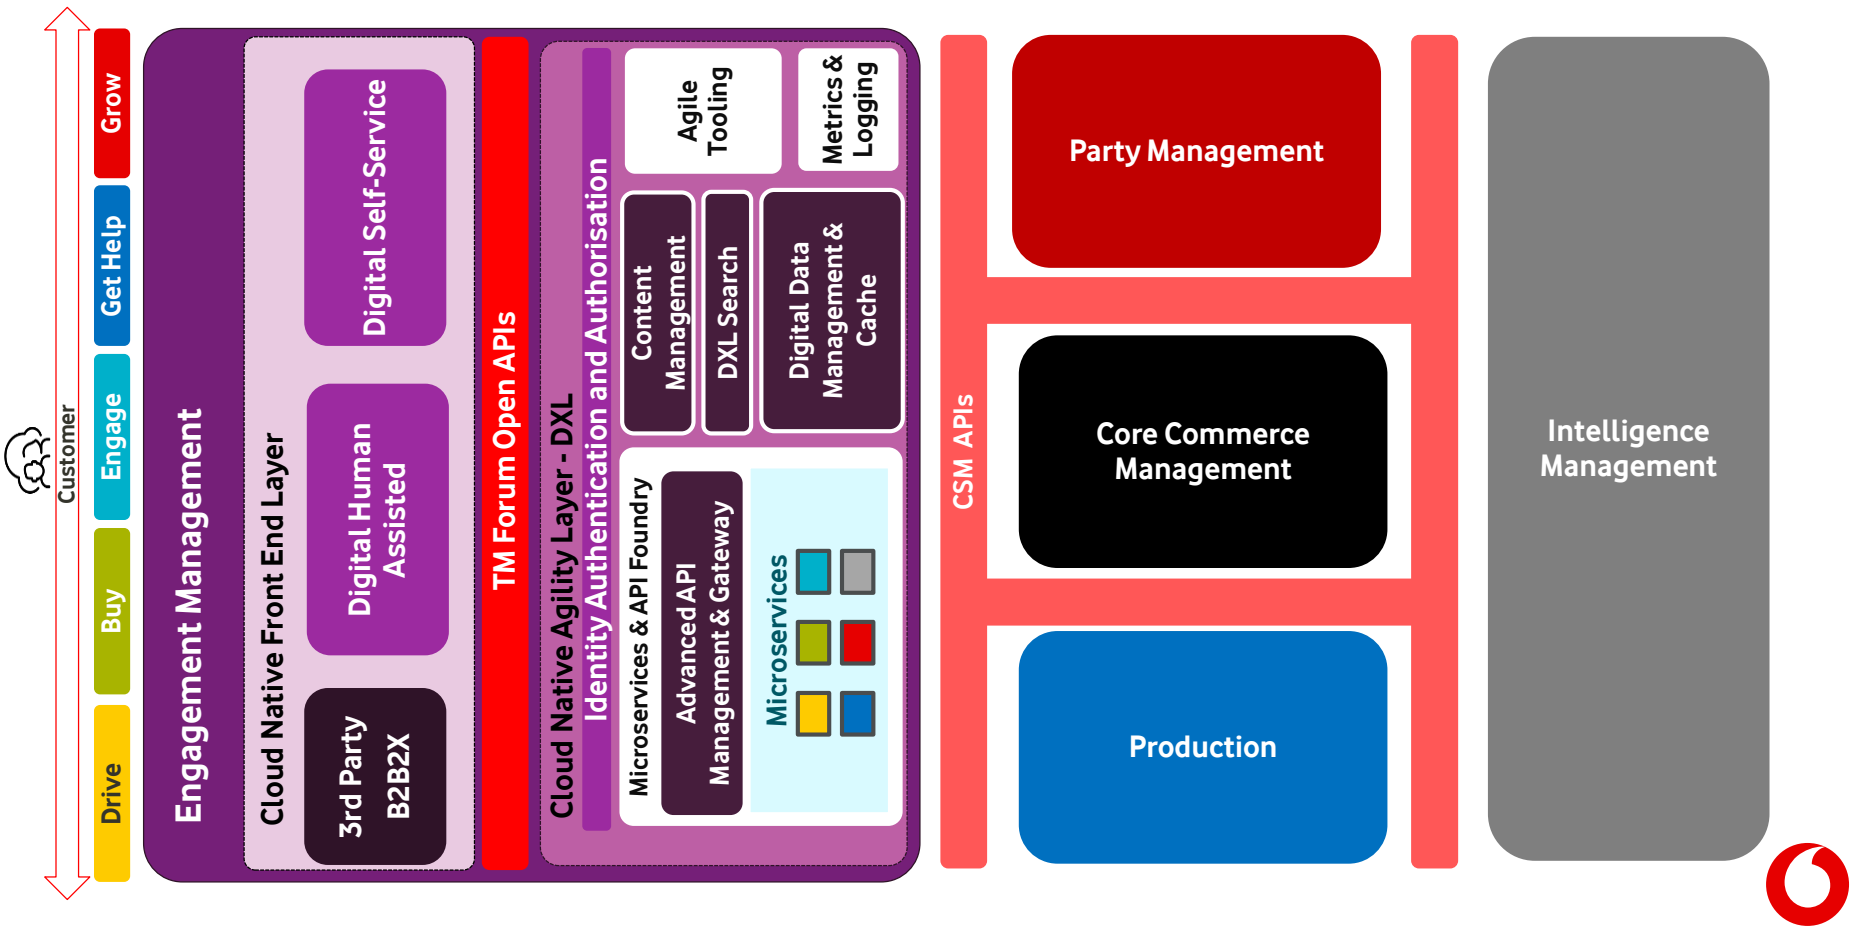

Apex Omnichannel Catalyst : Adaptive, Predictive & Personalised Experienced eXellence.

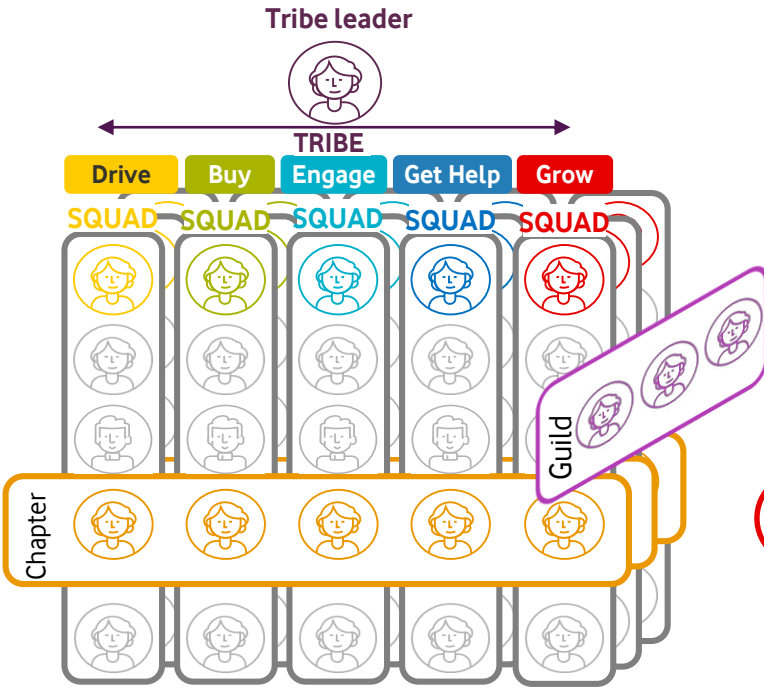

Winner! TM Forum Live! 2017: Outstanding Performance in the Catalyst Program

Future Architecture | Vodafone Digital Architecture Mapping to ODA

A Digital Accelerator in Each Market

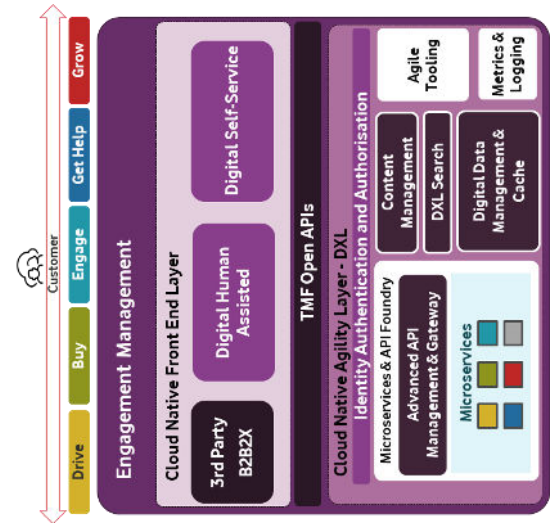

Design Thinking

Agile Methods

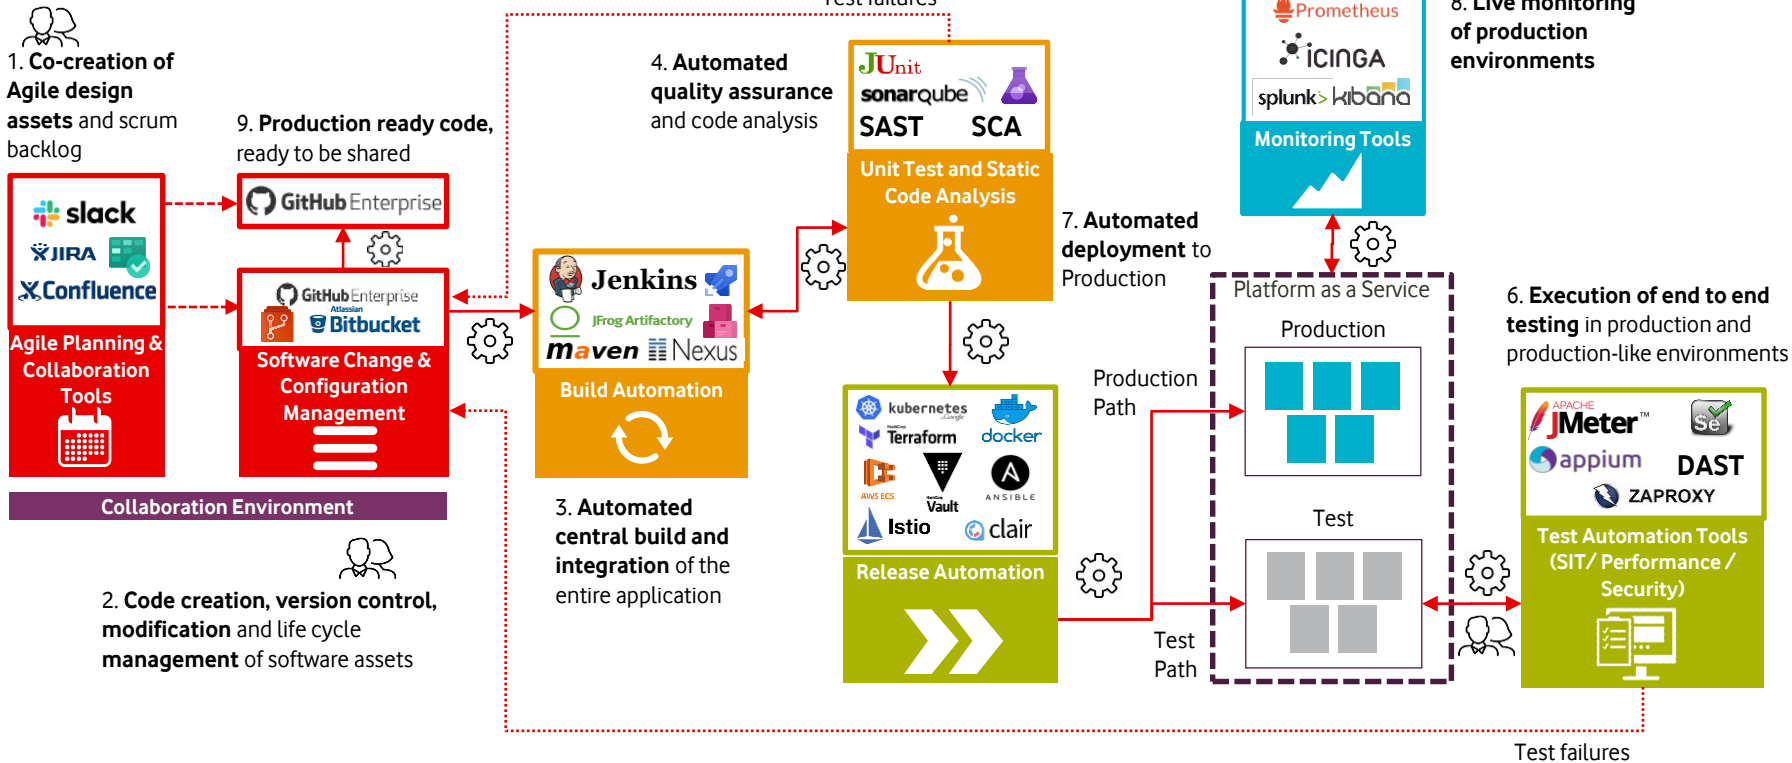

Iteratively Building Digital Capabilities to Local Priorities

People in Agile Formation → Using → Building Digital Capabilities

DevOps Tooling

Two Guilds and One Co-Creation Community to drive inner-source behaviours, global standards and speed

Collaboration

Governance

- **Lightweight governance** process (open source style)
- **Governance Team is made up of a SPOC to from each Local Market Team**
- Experts will pass through **TMForum API Certification program**
- Increased people technical career path
- Drive **collaboration** and **re-use** between local markets

Efficiency

Manage

- Manage and approve **Vodafone extensions** to TMForum openAPIs
- Manage the Vodafone MVP Journey APIs
- Monitor TMForum “schemafication” impact
- Guidelines for TMForum extensions
- Guidelines for DxL Journey APIs
- Contribute back to TMForum standard
- Monitor APIs usage and compliance

Transparency

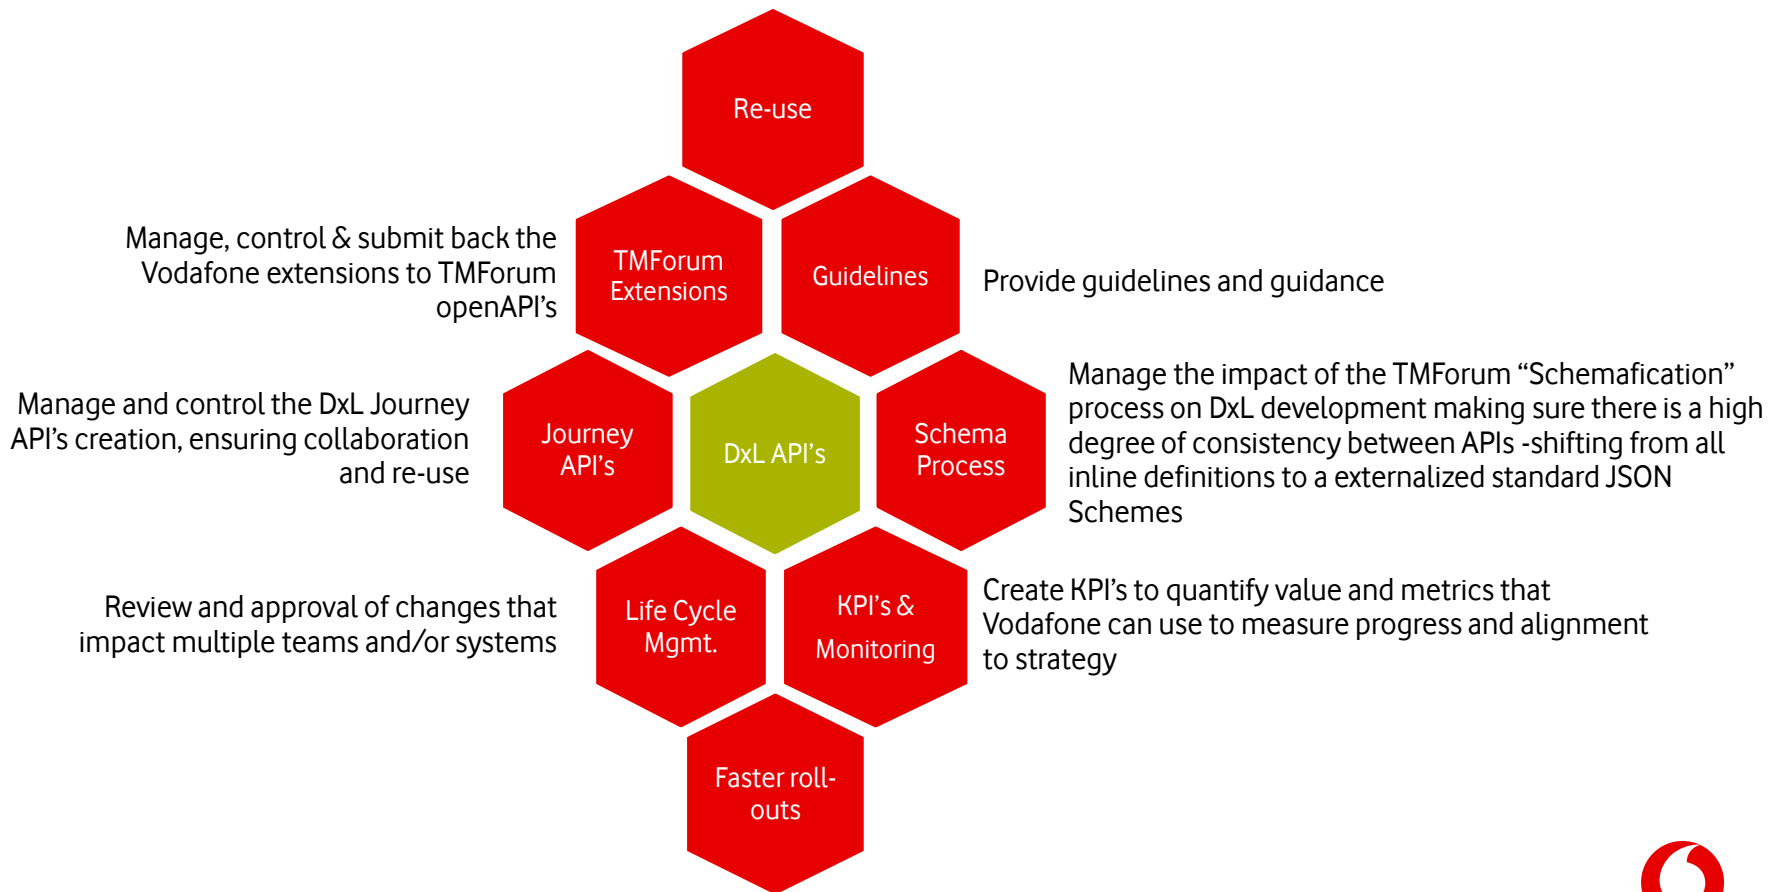

Catalog

- Repository for all local market APIs
- Federated Governance
- Community review of APIs
- **Tools & Conformance Testing Kits**
- Dashboard for Transparency of **Conformance and Testing Results**
- Governance community and support for APIs selection, extensions and mappings

API Guild | Considerations

Train the trainers

Open API Training, Certification & Conformance

“TM Forum Open APIs provide a complete framework for supporting our Digital Transformation, providing a common data model and internet standard API schemas, together with tools, methodologies and most importantly, training and certification.” – Steve Garley, Vodafone University

Train experts from each local market to become TMForum OpenAPI certified

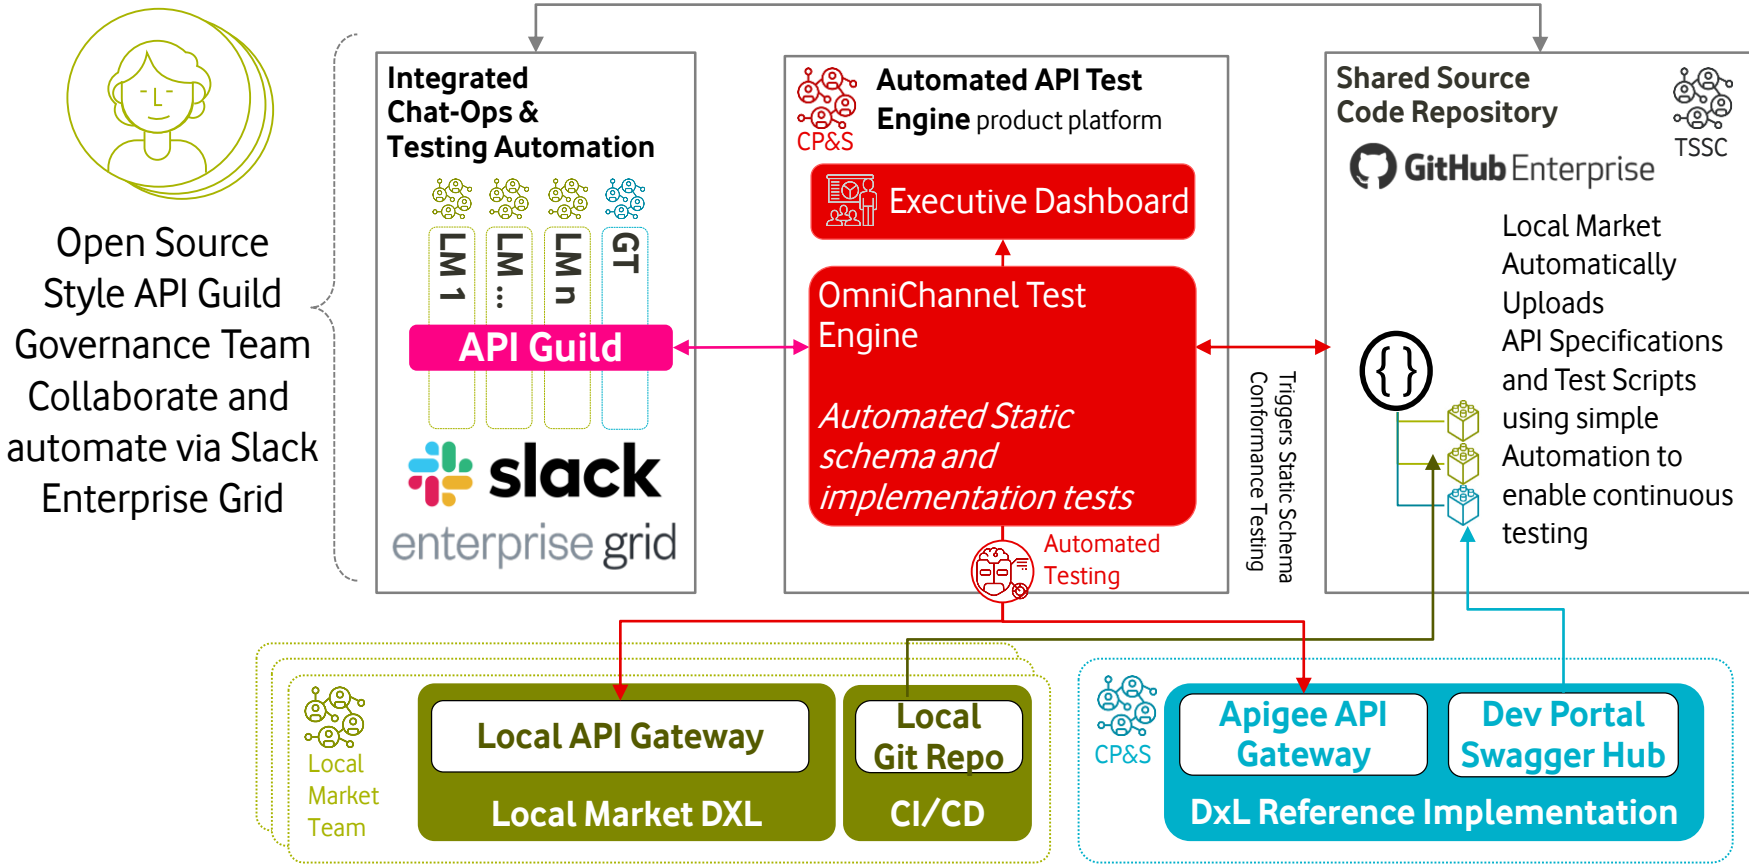

- TMForum Open API Developer certification
- TMForum Information Framework (SID) certification

The local experts will:

- play the leading role in educating the local market functions in API design, extensions & compliance to the standards accelerating digital transformation
- be part of the Federated Governance
- advising and reviewing the contributions from other local markets
- manage the governance artefacts and repositories
- publish all the Vodafone extensions back to TMForum OpenAPI

Automated API Compliance Engine | Architecture

Simplified

API Compliance - What it looks like

Static Check

Takes place before the API is deployed

- The API Designer gets the chance to test if his API is compliant with different standards
- Two type of results categories: RuleBased and InDepth.
 - Rule-based: will highlight which rule has been breached and where
 - InDepth: will provide more details using the delta format for differences

```
{  
  "ruleId": "delete-param",  
  "message": "/partyAccount (get) - Param fields  
deleted",  
  "path": "/partyAccount",  
  "method": "get",  
  "param": "fields"  
}
```

Dynamic Check

It requires a run-time environment, API is deployed

- Example use cases are embedded in API swagger
- Dynamic tests and μService mocks are generated in build pipeline
- Dynamic tests executed in build pipeline
- Dynamic tests verify positive and negative scenarios

Market	API	Timestamp	Compliance Status	Message
TEST	TMF666-Account Management-2.1	2019-10-18 16:13:43.767+01:00	passed	Compliance test passed
TEST	TMF634-Resource Catalog Management-2.0	2019-10-18 11:35:18.092+01:00	warning	Compliance test passedThe following rules have caused the compliance to issue WARNING:[add-optional-object-property];
TEST	TMF622-TMF622 Product Ordering Management API-4.0.0	2019-10-18 11:35:01.953+01:00	failed	The following rules have caused the compliance to FAIL:[edit-base-path][ids-required-param]The following rules have caused the compliance to issue WARNING:[add-optional-param][add-response][add-optional-object-property];

MyVodafone App & DXL Co-Creation Community

| Inner Source Co-creation model to deliver a platform

1 Platform Framework

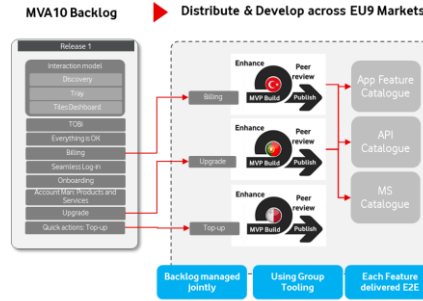

- DxL structure
- Common App
- Micro-services and APIs
- Consistent journeys
- Rules & standards to ensure transferability

2 Collaboration

- Markets contribute 10% of existing resources for co-dev
- Tooling & Guilds

3 Federated development

- Distributed E2E tasks to achieve working codes in modular catalogues
- Features, APIs and micro services are available for any other channels

4 App releases

- App is distributed in releases
- Markets can locally adapt within releases (No big bang)
- Business owns the features and manages the releases

Summary

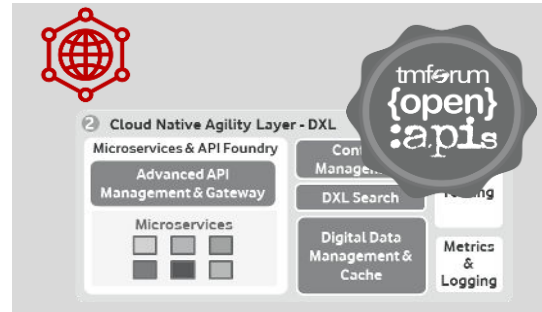

Commercial & Technology Architecture alignment on CX Journeys, Features

API Guild driving API Standardisation to TMForum OpenAPI

Inner-Source Approach to collaboration and governance

Collaboration with the Telco Community to drive the industry forward.
